Austin Leung

austinle@cs.cmu.edu | (917) 943-1081 | https://austinleung.me

Education

Carnegie Mellon University *Pittsburgh, PA*
B.S. – Information Systems, Minor in Computer Science, Minor in Software Engineering (GPA: 4.0/4.0) *May 2022*
Coursework: Application Design and Dev, Software Engineering for Startups, Database Design
and Dev, Computer Systems, Functional Programming

Work Experience

Pluralsight *Remote*
Software Developer Intern *May 2020 – Aug 2020*
- Pair and mob programmed on the full stack Channels/RoleIQ/Profile teams utilizing React
  and Redux for frontend with TypeScript, Node, C#, .Net, and PostgreSQL for backend
- Designed and developed an Express middleware security package to prevent cross-site
  scripting attacks on all Pluralsight webpages, distributed to each of 60 engineering teams
- Interviewed external stakeholders to discover use cases and refine product designs

CMU School of Computer Science *Pittsburgh, PA*
Teaching Assistant - Principles of Imperative Computation *Aug 2019 – Present*
- Teach data structures, algorithms, and C language concepts to 500 students each semester
- Lead weekly labs & recitations, participate in grading sessions, and hold office hours

MultiComp Lab - CMU Language Technologies Institute *Pittsburgh, PA*
Data & Machine Learning Research Assistant *May 2019 – May 2020*
- Explored web data crawling mechanisms to compile 3 multimodal datasets
- Built deep learning convolutional neural networks with PyTorch to detect multimodal patterns

Projects

TextLive Feb 2020 – May 2020
- Published an Android app on the Google Play store allowing users to call friends to start a
  conversation where text is typed continuously rather than in separate messages
- Integrated login and registration with profile and contacts using React Native, Node, and
  MongoDB

The Reddit Sentiment Analyzer | 1st Place - CodeDay Pittsburgh Spring 2019 May 2019
- Created a React web app that visualizes colorized sentiment of Reddit user activity and
  subreddit posts to better understand the mood of each user and subreddit
- Analyzed aggregated text with sentiment analysis to display colors based on emotions and
  intensities

Skills

Programming: TypeScript, JavaScript, Python, C, HTML, CSS, SQL, Ruby, C#, Java, SML, R
Technologies and Applications: Git, Rails, React, React Native, Node, Express, PostgreSQL, Redux, Docker, Github
Actions, TeamCity, Vue, .NET, PyTorch
